

Lest's preserve our ocean!

Shark
Sharks are a group of fish that have a cartilaginous skeleton instead of a bony one. They are found in all of the world's oceans and are known for their powerful jaws and sharp teeth. Some species of sharks are apex predators, meaning they are at the top of the food chain and have no natural predators. Others are preyed upon by larger sharks or marine mammals. Sharks play an important role in the marine ecosystem by helping to control the populations of other animals.
